

Week 1, Lecture 2 Handout: HTML Tags

1. Document Structure & Layout Containers

- **<header>**
Represents introductory content or a group of navigational aids. It typically contains headings, a logo, or author information at the top of a page or section. [5, 6, 7, 8, 9]
- **<main>**
Specifies the dominant, unique content of the document. Modern web standards dictate that there must only be one visible `<main>` element per webpage. [10, 11, 12]
- **<section>**
Groups a distinct, related collection of information together under a single thematic heading (e.g., an "About Me" or "Services" block). [13]
- **<footer>**
Appears at the very base of a page or section, typically housing copyright notices, terms of service, and direct contact details. [14, 15]

2. Inline Text Formatting & Styling

- ****
Identifies text that has great structural importance or urgency. Browsers render this text in **bold** by default.
- ****
Indicated for words that have a stressed emphasis. Browsers render this text in *italics* by default.
- **
**
Produces a line break in text (a carriage return). This is an empty/self-closing element, meaning it does not require a closing tag. [16, 17, 18, 19, 20]

3. Hyperlinks, Lists, & Media

- **<a> (Anchor Tag)**
Creates a hyperlink that connects your page to another webpage, file, email address, or internal location. It requires an `href` attribute to specify the destination URL. [21, 22, 23, 24, 25]
 - ** (Unordered List)**
Defines a collection of items that do not need to follow a strict numerical order. Browsers display these items with bullet points by default. [26, 27, 28, 29]
 - ** (List Item)**
Used inside list containers (like `<ul>`) to wrap each individual item contained within the list. [30]
-

Homework Assignment: The Enhanced Bio Page

Objective: Expand your existing web code by introducing professional layout sections, lists, links, and bold emphasis.

Task Instructions

1. Open your `index.html` file from Lecture 1 inside **VS Code**.
 2. Wrap your primary headings inside a `<header>` tag.
 3. Wrap your primary content body inside a `<main>` tag.
 4. Below your main heading, create a `<section>` called "My Favorite Skills".
 5. Inside that section, build a bulleted list using `<ul>` and `<li>` to display your top three technical skills.
 6. Use the `<strong>` tag to make your absolute favorite skill **bold**.
 7. Create another `<section>` called "Connect With Me".
 8. Use an `<a>` tag inside this section to create a clickable link pointing directly to your GitHub or LinkedIn profile.
 9. At the very bottom of your code, add a `<footer>` containing the text: © 2026 Built by [Your Name].
 10. Save and use **Live Server** to test that your link correctly opens your profile. [31, 32, 33, 34, 35]
